

TECHNICAL INFORMATION

ORIGEN BLOCK GREASE Soda Based Grease

DESCRIPTION

ORIGEN BLOCK GREASE is a soda-based grease of high drop point for use on plain trunnion bearings and similar heavily loaded applications. This product is economical in use as it resists glazing and thereby ensures uniform feeding of lubricant.

APPLICATION

ORIGEN BLOCK GREASE is used on plain bearings in general, particularly those equipped with a grease cavity or well and on trunnion bearings. The block is placed on the top half of the trunnion journal. The sweeping motion of the journal on the block grease lubricates the bearing.

TECHNICAL CHARACTERISTICS

NLGI	7
Worked penetration @ 25°C0.1mm	30 - 60
Drop Point Min °C	>160
Oil viscosity cSt @ 40°C Mn ² /sec	1000

Pack size: 2.2kg

*MSDS available on request.

Version 2: Aug 25
