

TECHNICAL INFORMATION

ORIGEN BNS HT-M 2 High Temperature Grease

DESCRIPTION

ORIGEN BNS HT-M2 is a premium grade high temperature industrial lubricating grease, made from high quality hydro-cracked base oil and a high temperature thickening compound. It is fortified with extreme pressure and anti-wear additives for maximum protection at a wide range of temperatures. The lubricant reduces surface friction and unprotected metal contact with a permanent reduction in power consumption, extending the components working life. Suitable for heavy loaded slow/medium speed bearings and sliding feet subjected to high ambient temperatures 380°C.

Selected additive technology ensure lubricant retention to all metal surfaces creating a permanent protecting shield up to temperatures 380°C.

APPLICATION

ORIGEN BNS HT-M2 is recommended for use in all types of open and enclosed industrial chains, cement kiln driers, brick kiln cars, slides, guides and plain bearings where high temperature operating conditions present a problem.

BENEFITS

- Resist high temperature, shocks and vibration.
- Excellent metal adhesion.
- Emergency lubrication through selected additives.
- Outstanding anti-wear characteristics.
- Protection against corrosion and rust.
- Excellent lubricant performance over a wide temperature range.
- Repels water.

TECHNICAL CHARACTERISTICS

NLGI	2
Colour	Dark Grey smooth grease
Temperature (°C)	-7 to 380
Thickener Type	Benone
Base Oil Viscosity @ 40°C, cSt	95
Drop Point, °C	Non-melt

50kg

15kg

*MSDS available on request.
